PROJECT PROPOSAL

App: HollyBiz

Presented by Team NewBee

Member: Jong Jun Xiang, Ling Han Lun, Tang Yong Sheng, Sii Jong Ming, Khiew Jung Huat

TEAM BACKGROUND

NewBee

Team Member

1. Jong Jun Xiang (104582)
    - Project Manager
2. Ling Han Lun (104773)
    - Quality Assurance & CI/CD Engineer
3. Tang Yong Sheng (102992)
    - Lead Mobile Architect (Flutter/Dart)
4. Sii Jong Ming (106335)
    - Backend & AI Integration Specialist
5. Khiew Jung Huat (104669)
    - Lead Systems Analyst & Requirements Engineer

CLIENT BACKGROUND

Holly Burger's

- Established in 2023.
- F&B business participating in events such as Kuching Festival and Oktoberfest.
- Managed by two business owners.
- Client contact person: Kelly Then.
- Proposed mobile app aims to improve daily business operations and management.

PROBLEM STATEMENT

1. **Manual Order Recording** – Orders are recorded on paper, making it difficult to calculate.
2. **Inventory Management Issues** – Stock quantities and expiry dates are easily overlooked.
3. **Product Cost Calculation** – Difficulty calculating individual product costs, affecting profit estimation and pricing.
4. **Delayed Financial Calculations** – Delaying profit calculation.
5. **Heavy Accounting Workload** – Only one person manages accounting and large amounts of data, making business performance analysis difficult.
6. **Loss of Sales Records** – Previous sales records may be lost.

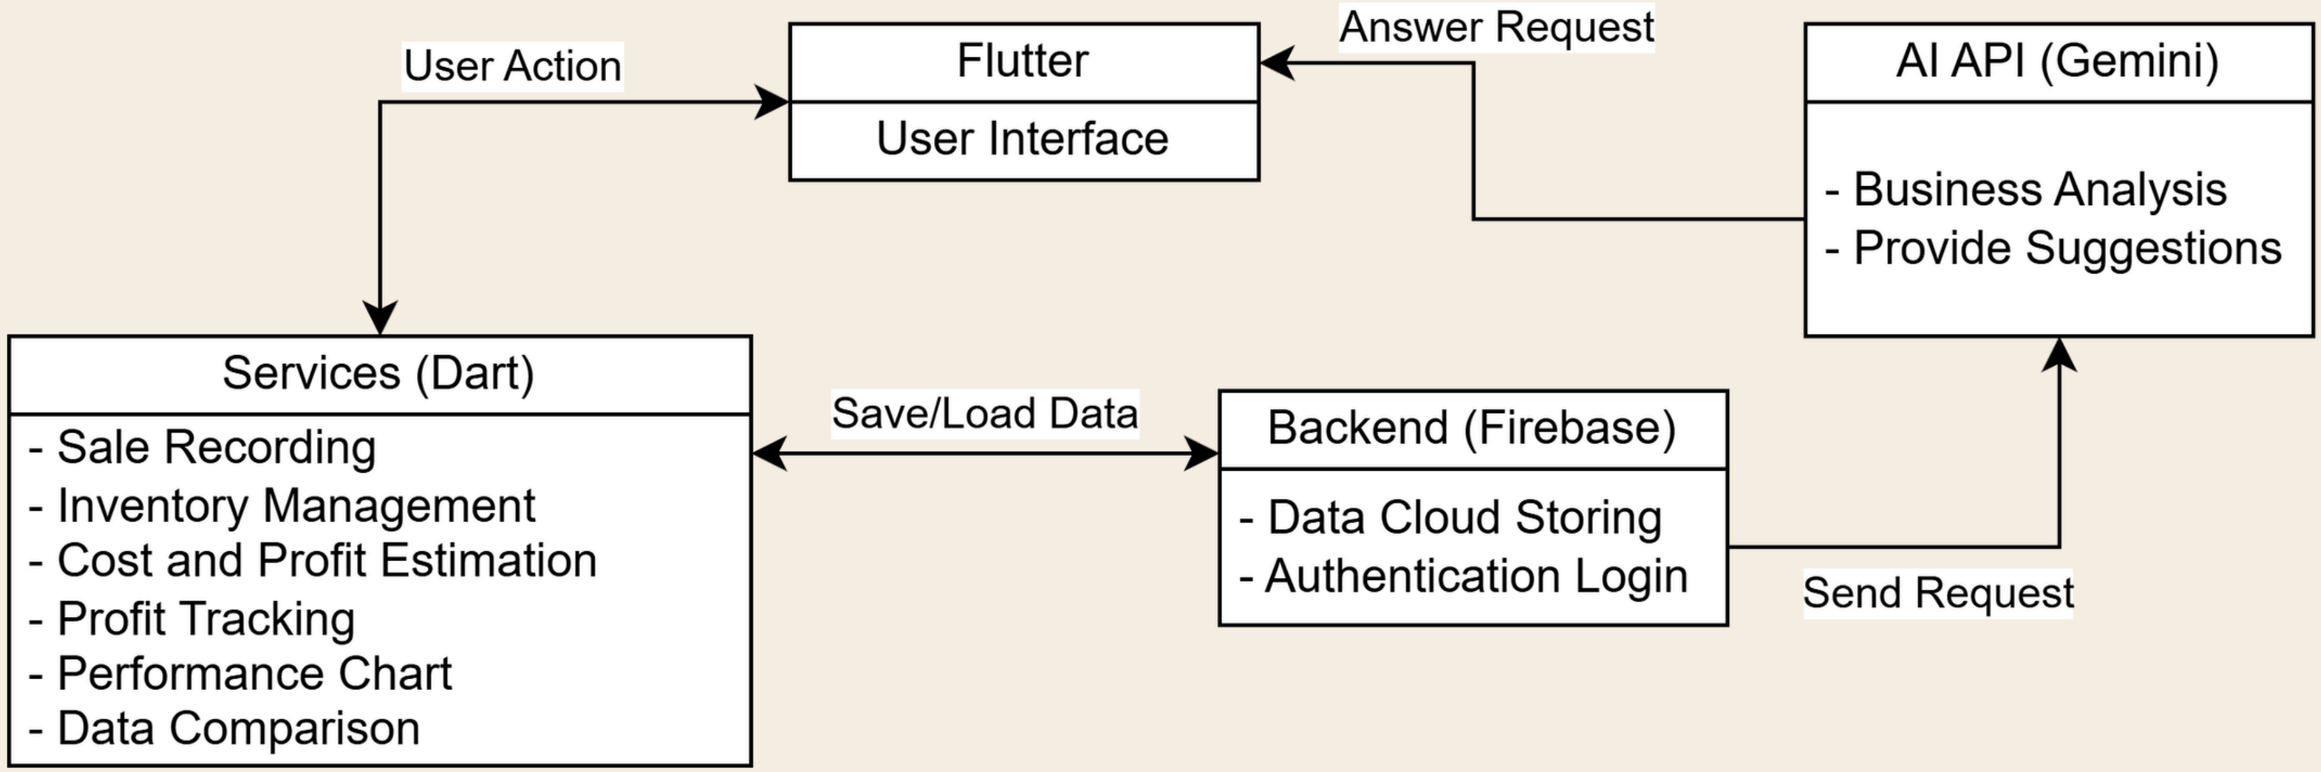

Proposed Solution

A Flutter-based mobile application is proposed to help Holly Burger manage inventory, track sales, calculate costs and profits, and monitor business performance. It also uses AI to analyse financial records and suggest business improvements.

PROJECT OBJECTIVE

1. Analyse Business Operations
   - Study current business and financial management processes.
   - Identify system requirements.
   - Success: Client-approved SRS requirements.
2. Develop Flutter Mobile Application
   - Manage inventory, sales, product costs, and event finances.
   - Success: All must-have features pass acceptance tests.
3. Integrate AI Features
   - Analyse business performance.
   - Provide financial recommendations based on historical records.
   - Success: At least 80% classification accuracy.
4. Test and Evaluate Application
   - Test functionality, usability, and reliability.
   - Collect client feedback.
   - Success: At least 50 test cases, 60% coverage, and UAT sign-off.

SYSTEM CONTEXT AND ARCHITECTURE

PROJECT SCOPE

In scope (will deliver this semester)	Out of scope (will not deliver)
Inventory management, including stock quantities and expiry dates.	Barcode scanning and automatic stock counting.
Daily sales recording and best-selling product tracking.	Automatic sales recording through a POS system.
Product cost calculation and estimated profit based on selling price.	Automatic updates of ingredient prices from suppliers.
Event income, expense, and profit tracking.	Automatic import of expenses from bank transactions or receipts.
Business performance charts and historical record comparison.	Automatic recovery of lost paper records.
AI-powered financial analysis and business recommendations.	AI prediction of future sales and profits.

FEATURES AND USER STORIES

FR-ID	Module	User Story
FR-01	Inventory Management	Record stock levels and expiry dates to prevent waste and maintain optimal supply.
FR-02	Sales Management	Track daily sales by product type to identify top-performing items and sales trends.
FR-03	Product Costing	Calculate unit production costs based on ingredient usage to understand product margins.
FR-04	Profit Estimation	Estimate profit margins against selling prices to support data-driven pricing strategies.

FEATURES AND USER STORIES

FR-ID	Module	User Story
FR-05	Event Financial Management	Record income and expenses for each event
FR-06	Financial Records	Review past transactions without losing important information
FR-07	Business Dashboard	Understand business performance easily
FR-08	Performance Comparison	Identify changes in business performance
FR-AI-01	AI Business Analysis	Use AI to analyse financial trends and provide recommendations

AI

1. Technology & Model

Cloud-based Generative AI powered by Gemini.

2. Core Capabilities

Analyzes historical event financial data, tracks performance trends, and generates actionable business recommendations.

3. Workflow (Input ➔ Output)

- Input: Event revenue, expenses, and profit records.
- Output: Financial trend analysis, explanatory insights, and recommendations.

4. Scope & Value

- Scope: Financial data analysis & recommendations (Future sales prediction is Out of Scope).
- Value: Reduces the owner's manual analysis workload and supports data-driven pricing & business decisions.

AI Constraints & Risks

API costs, internet connection, response time, data privacy, and API key protection.

METHODOLOGY

Agile Scrum Framework

-2-week sprints for iterative development, testing, and client feedback integration.

TSPi Roles & Responsibility

-Team members follow assigned TSPi roles to ensure clear accountability.

Version Control & CI/CD

-Managed via GitHub Issues, feature branches, PRs, peer reviews, and GitHub Actions.

October 2026

THANK YOU

Thanks For Watching
